

Professional Summary

Motivated Management Information Systems (MIS) student with practical experience building AI-powered web applications, full-stack platforms, and machine learning models. Combines a strong business and finance foundation with hands-on technical skills in Python, Next.js, and Large Language Models. Active participant in GDG Qassim and multiple hackathons. Holds KAUST Academy Level 2 AI certification.

Technical Projects & Experience

AI & Full-Stack Developer (Independent Projects)

2023 – Present

- **Absher AI Helper** — Smart Chatbot platform that helps users get accurate and comprehensive information about Saudi government services on the Absher platform, with simplified Arabic guidance and instant navigation support (Next.js, LLM).
- **Numu Smart Farm Platform** — Participated in Jada-thon Hackathon with an AI credit-scoring concept for farmers to enable fair access to agricultural equipment financing (Next.js, Supabase, Machine Learning).
- **Midad AI Agent** — Developed an LLM-powered agent automating digital platform operations, content analysis, and operational workflows using RAG architecture (Next.js, LangChain).
- **Credit Risk Analysis System** — Deployed a Random Forest classifier for credit risk prediction with a Flask REST API; live on Render. Includes an interactive web interface for data input and result visualization.
- **Ilm / ■■■■ (Arabic LLM Research)** — Building a nanoGPT-style Arabic transformer from scratch in PyTorch featuring a custom BPE tokenizer, RoPE positional encoding, RMSNorm, and SwiGLU activations; trained on Kaggle T4 GPUs.
- **Finance & Economics AI App** — Streamlit application offering AI-driven CVP analysis, financial modeling, and interactive scenario planning tools.
- **Waraq Platform** — AI-powered Arabic presentation generator supporting multi-provider LLM architecture, Saudi-specific themes, and Supabase authentication (Next.js, Supabase, Cloudflare Tunnel).
- **Additional Projects** — Task Manager Dashboard, Honey Store E-Commerce, Health Guide AI Copilot, Horoof Educational Game, Lamma Social Game — demonstrating full-stack proficiency across the Next.js / Tailwind / Supabase ecosystem.

Education

Bachelor's Degree in Management Information Systems (MIS) — 3rd Year Student

Qassim University, College of Business & Economics | Expected Graduation: 2027

- Relevant Coursework: Database Systems, Systems Analysis & Design, Financial Accounting, Operations Management, Business Intelligence, Organizational Behavior.
- Active participant in GDG Qassim chapter events, workshops, and hackathons.

Certifications & Bootcamps

KAUST Academy — Artificial Intelligence (Level 2)

January 2026

- Completed 40+ hours covering Machine Learning Foundations, ML Algorithms, Deep Learning Fundamentals, and Unsupervised Learning.

Udacity — AWS AI/ML Scholars Program (Future AWS Agent Developer Track)

2025 – 2026

- Hands-on ML engineering, cloud deployment, and multi-agent systems development on AWS.

GDG Qassim — AI & Data Science Curriculum

February – May 2025

- Python, Machine Learning, and Deep Learning tracks with practical project implementations.

DeepLearning.AI — Linear Algebra for Machine Learning

2025

- Core mathematical foundations including vectors, matrices, eigenvalues, and their applications in ML.

Technical Skills

AI & Data Science:	LLMs, RAG, Model Fine-tuning (Gemma, Qwen), PyTorch, HuggingFace Transformers, Scikit-learn, Pandas, Ollama, SQL
Full-Stack Development:	Next.js, React, TypeScript, Tailwind CSS, Python, Flask, Streamlit, Supabase, PostgreSQL, Vercel, GitHub Pages
Business & Finance:	Financial Analysis (CVP), Saudi Stock Market (Tadawul), CME-1A Concepts, Operations Management, Team Leadership
Tools & Platforms:	Git / GitHub, VS Code, Kaggle (GPU), Google Colab, Cursor AI, Render, Cloudflare Tunnel

Languages

Arabic (Native) • English (Professional Working Proficiency)
